

# **Multi Table/Tablespace to Single Table PBG 4 Techniques**

**Todd Mollenhauer, BMC Software**

# Agenda

- Background – Why are we here?
- Overview of 4 Methods to convert from MTTS to STTS PBG
  - Unload/Drop/Create PBG/Load – aka UDCL
  - Move Table
  - Create ‘%\_NEW’ Tables in PBG, SQL to Copy Data, Rename – aka RENAME
  - BMC Change Manager DML
- Pro/Con of each
- Effort for each method
  - Number of panel edits time per Table
  - Amount of code needed to convert each table
- Recommendations
- Questions

If you ran this query..... on all your subsystems

```
SELECT SUM(NTABLES)  
FROM SYSIBM.SYSTABLESPACE  
WHERE  
NTABLES > 1
```

# If you anticipate you'd get.....

**Then this session will be.....**

<b>0-100</b>	<b>Boring</b>
<b>100-500</b>	<b>Mildly interesting</b>
<b>500-1,000</b>	<b>Interesting</b>
<b>1,000-25,000</b>	<b>Very interesting</b>
<b>25,000+</b>	<b>Life changing</b>

# History and background

- Deprecation of MTTS announced in March 2019 with FL504
- Only options at the time:
  - Navigate Panels in vendor Admin products.
  - Code UDCL (Generate-And-Tape)
- FL508 June 2020
  - Move Table Support

**Unload/Drop/Create/Load  
(UDCL)**

# UDCL Details

- Unload Table
- Drop Table
- Create PBG (DSSIZE, MAXPARTIONS) for each Table in MTTS
- Create Table (IX, VW, SY, AL, RI) in new PBG
- Load Data
- Copy, Runstats, Rebind

# UDCL Pros

- Any release of Db2 and Function level

# UDCL Cons

- Lots of Code required (~150 lines of DDL/Utilities per Table)
- Risk
  - Drop
- Availability – objects unavailable from Drop to end of process
- Administration time (30 seconds of panel time per table)
  - 400 Tables is 4 hours of administration using admin panels
  - 400 Tables is 16,000 keystrokes in panels

# UDCL Admin Panel Flow – Doing 400 Tables....

# Move Table Admin Panel Work and Code Generated – 400 Tables

# UDCL Administration Summary

- Administration tool panel navigation
  - About 30 Seconds per table
  - About 40 keystrokes per table
-  Hand-tape
  - About 200 lines of code per table
  - There's a drop-down menu!

# UDCL Administration options

- Vendor administration panels for small/medium numbers
- No good options for large numbers!

# Move Table

# Move Table Details

TABLESPACE  
LEVEL  
OPERATIONS

- Be at FL508 (Available June 2020)
- Create PBG (DSSIZE, MAXPARTIONS) for each Table in MTTS
  - Must be MAXPARTIONS 1 and DEFINE NO
- Alter Tablespace Move Table to Tablespace....
- Online Reorg
- Runstats, Rebind
- Alter TS MAXPARTS > 1

# Move Table Pros

- Less code (About 1/3 UDCL)
- Simpler code – Easier to Generate and tape
  - Create PBG TS
  - ALTER TABLESPACE DB.TS MOVE TABLE CR.NAME TO TABLESPACE DB.PBGTS
  - Reorg/Copy/Runstats/Rebind
- Low Risk
  - No Drop
- High availability

# Move Table Cons

- FL508
- No ease of product Administration time (30 seconds of panel time per table)
  - 400 Tables still about 4 hours of panel work
- Generate-and-Tape
  - 400 Tables about 20,000 lines of Code
  - No checking prior to execution
    - Mismatch between TB and new PBG
      - Missing PBG
      - Duplicate TB into Same PBG

# BMC Catalog Manager Generate-And-Tape Process

- Create Model for CREATE Tablespace (PBG) – (named MVTS)
- Create Model for MOVE TABLE DDL (named MOVE)
- From Table List: APPLY Model MVTS to list to get TS PBG DDL
- From Table List: Apply Model MOVE to get MOVE Table syntax
- From Original TS list: REORG ALL from command line to generate REORGS
- From NEW TS List: RUNSTATS ALL from the command line
- From NEW TB list: Enter PG All to get list of Packages, then REBIND ALL for Rebinds

# CREATE Member MVTs in Saved SQL Member

# Move Table Admin Panel Work and Code Generated – 400 Tables

# Move Table Administration options

- Administration tool panel navigation for small/medium numbers
- Generate-and-tape for large numbers
  - Administration products can help with Table → PBG match up

The background of the image features a series of concentric orange circles that create a tunnel-like or ripple effect. These circles are centered on the right side of the image and expand towards the left. The background color transitions from a solid blue on the right to a gradient of blue and orange on the left.

**Rename**

# Create '%\_NEW' in PBG, SQL Insert, Rename

- Create PBG (DSSIZE, MAXPARTIONS) for each Table in MTTS
- Create Tables/Indexes with '\_NEW' suffix using original DDL into PBG
- Insert into \_NEW (Select \* from original)
- Rename Tables and Indexes
  - Original to \_OLD
  - \_NEW to Original

# Create '%\_NEW' in PBG, SQL Insert, Rename Pros

- Any pre FL508 Db2 release
- No Drop
- High availability
- All of the Admin can be cooked up ahead of time
  - SQL and Renames at execution
- Good for pre-FL508 SIMPLE environments with
  - very little data
  - few indexes
  - no views
  - No: Clones, Accelerator tables, Triggers, MQT, Temporal, .....

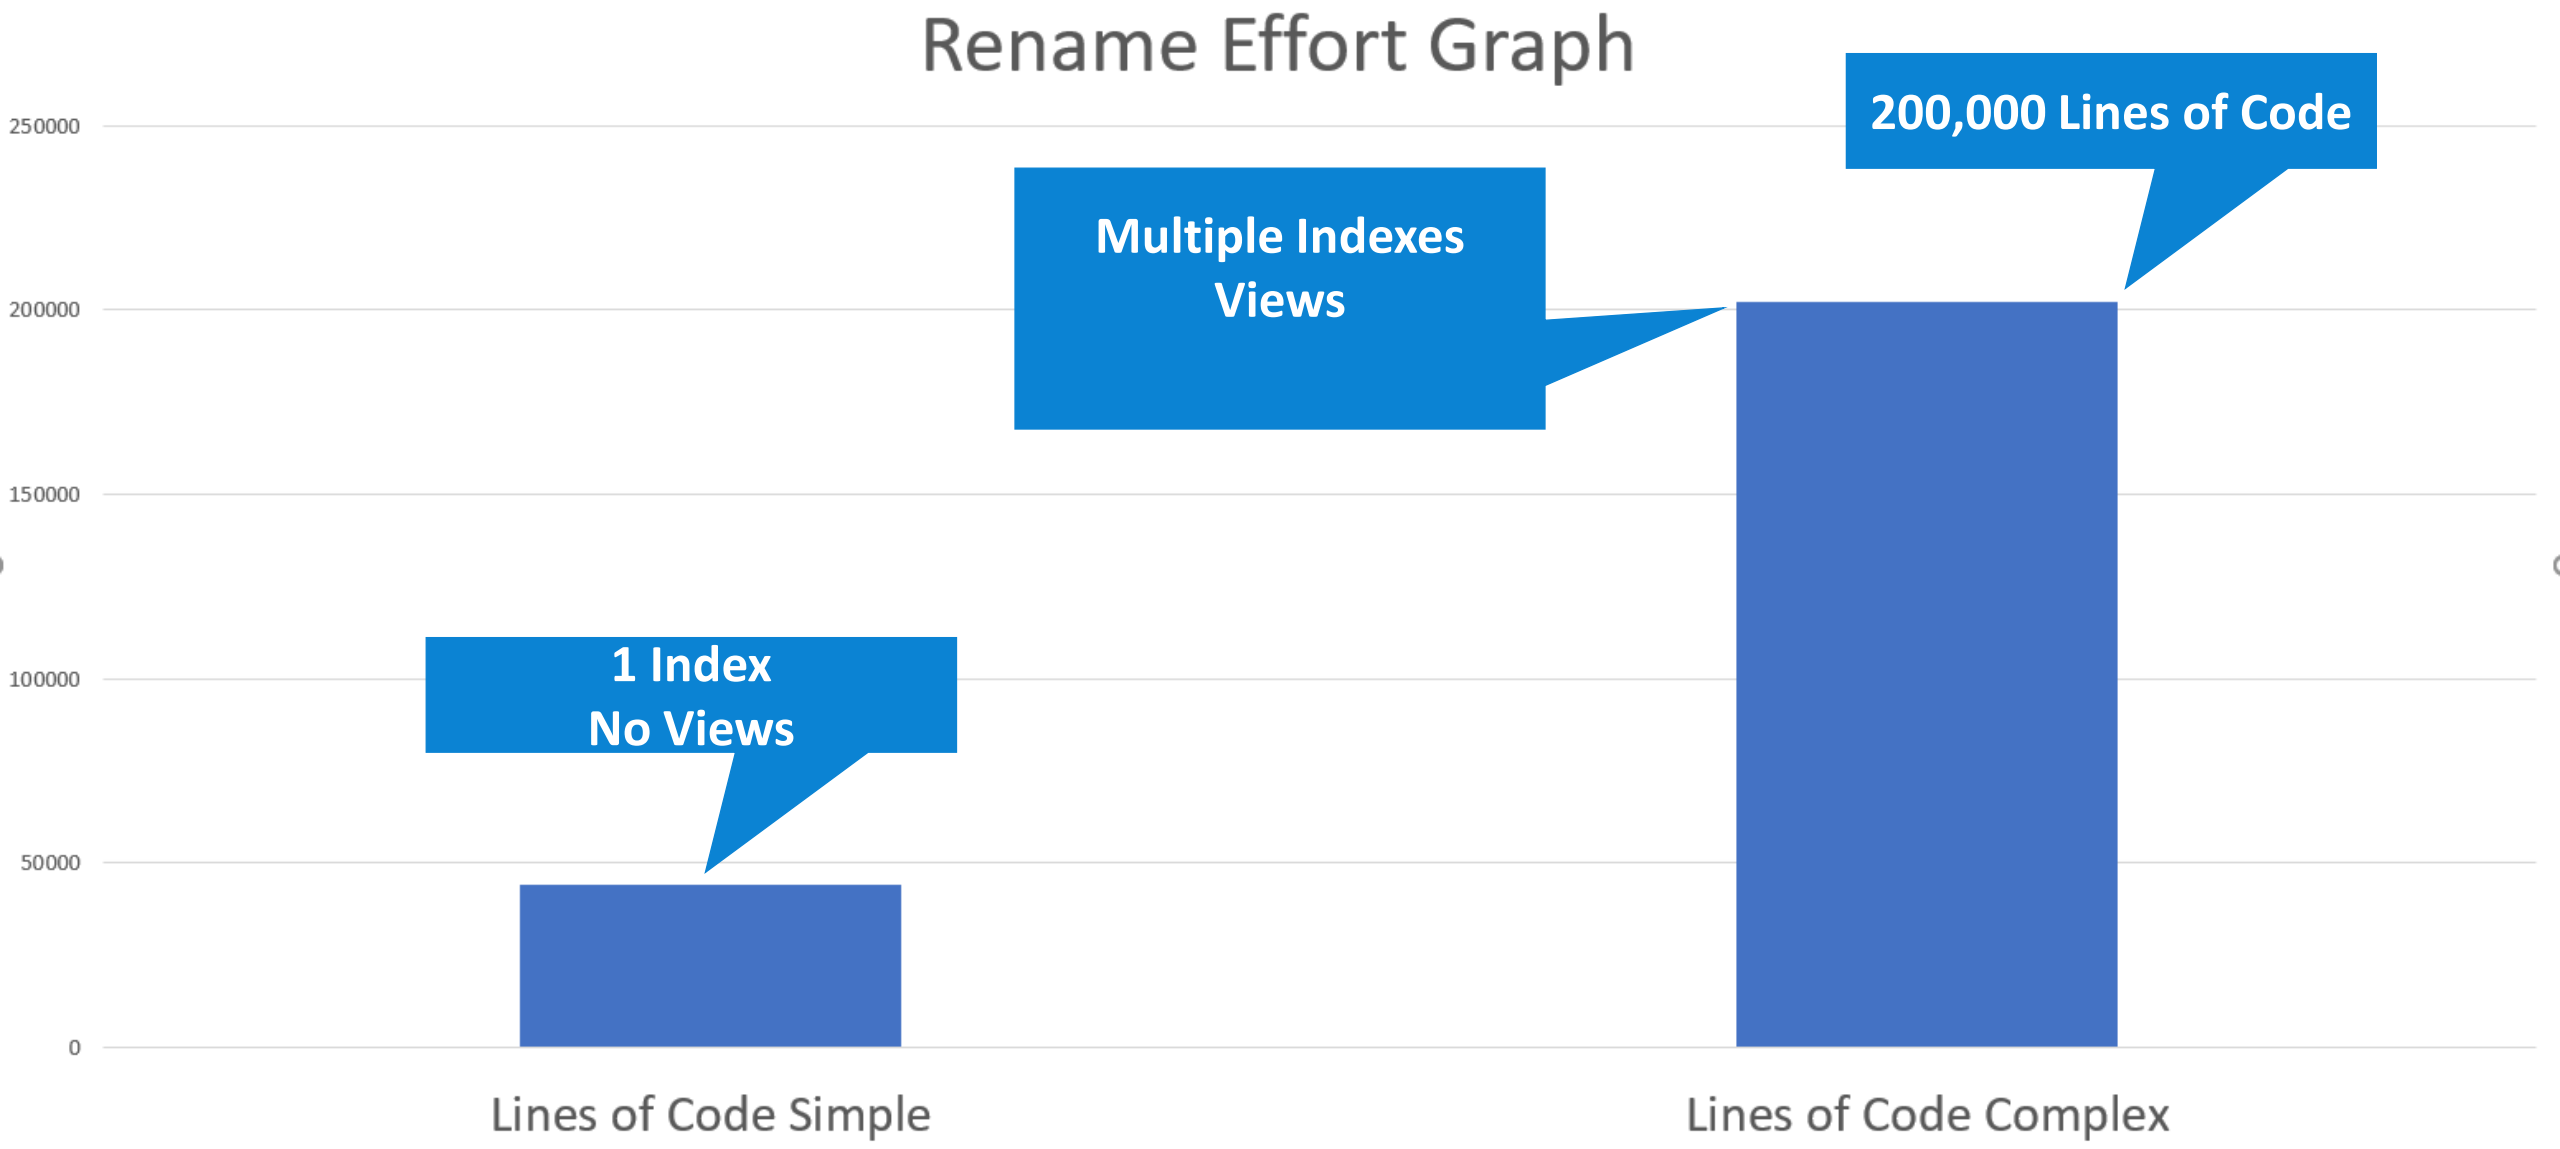

# Create '%\_NEW' in PBG, SQL Insert, Rename Cons

- Rename is fussy.....
  - -750 SQL Code if you have:
  - Views, synonyms, accelerator, archive, res limit table, clone, triggers, MQT, Temporal, Column mask, row permission
- Convert Synonyms to Alias prior (was on your list anyway)
- Views must be saved/dropped/recreated
- Logging issues with large numbers of Rows

# Create '%\_NEW' in PBG, SQL Insert, Rename Effort Graph

- Medium code effort
  - TS DDL
  - TB/IX DDL
  - Simple 1 line SQL
  - Rename
- Effort increases exponentially with Views, Synonyms, Indexes

# Create '%\_NEW' in PBG, SQL Insert, Rename Effort Graph – 400 Tables

# Create '%\_NEW' in PBG, SQL Insert, Rename options

- Generate-and-tape for very specific pre FL508 use cases

# BMC Change Manager DML

# Change Manager DML Process

- Edit Change Manager DML to do conversion to MTTS
  - Samples provided in product library
- IMPORT into Change Manager
- Analyze to get Worklist
- Run!

# What is Change Manager DML?

- DML-like language to **SPECIFY** mass changes on a grand scale
- Simply **IMPORT** then **ANALYZE** and **EXECUTE**

# QUICK EXAMPLE:

## Convert Simple single-table Tablespaces to PBG

**UPDATE TABLESPACE  
SET**

**MAXPARTITIONS = 5**

**WHERE**

**DBNAME LIKE 'SXP%'**

**AND NTABLES = 1**

**AND PARTITIONS = 0**

**;**

**ALTER  
To  
PBG**

**SCOPE**

**Single TB/TS**

**SIMPLE TS**

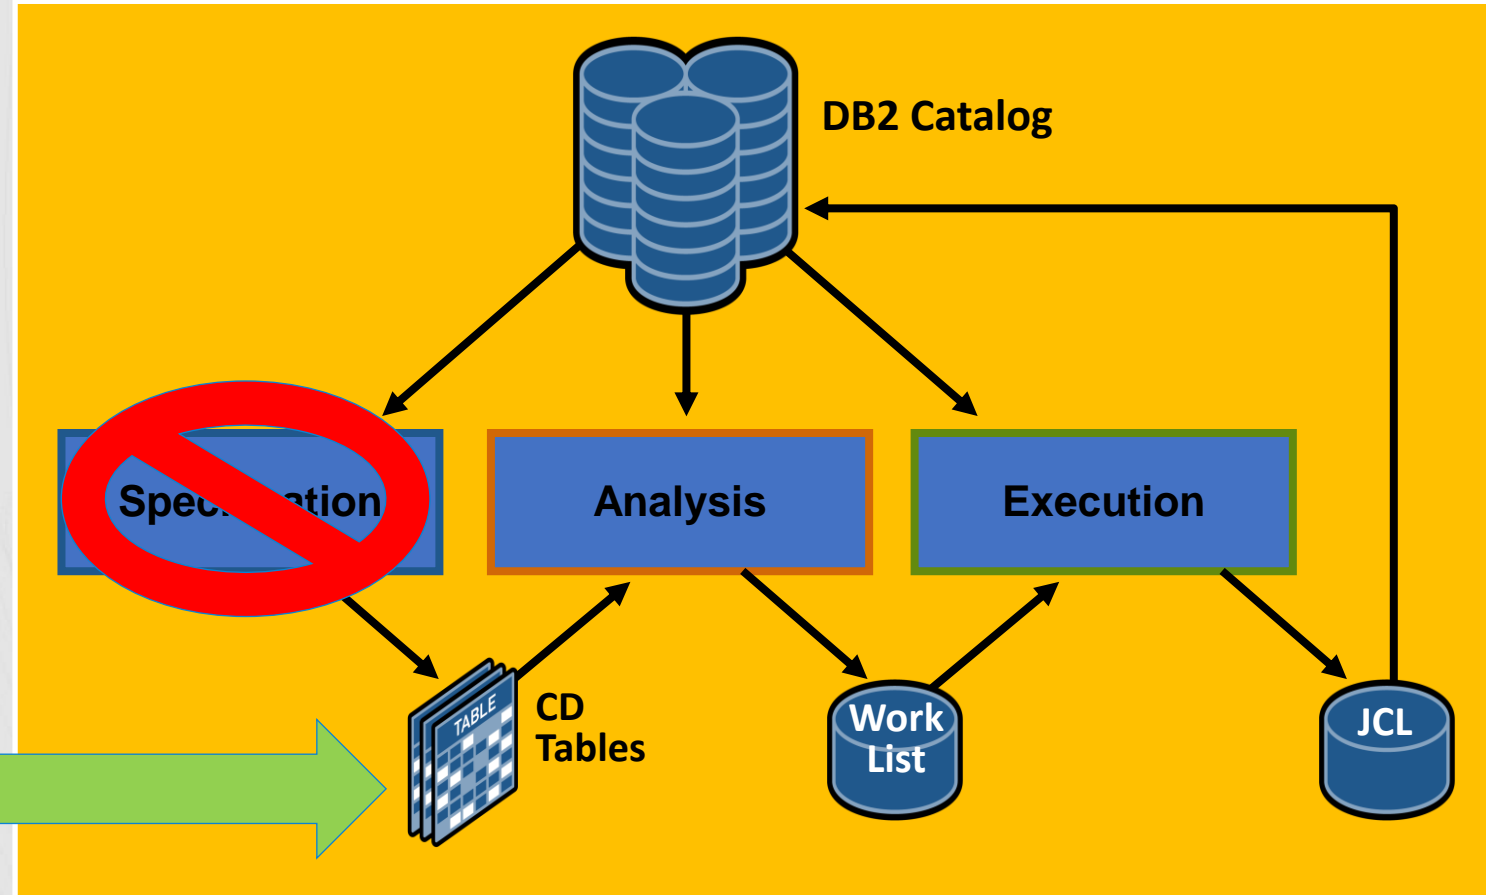

# Change Manager DML Architecture

**DML PDS Member**

```
UPDATE TABLESPACE  
SET  
  MAXPARTITIONS = 5  
WHERE  
  DBNAME LIKE 'S%'  
  AND NTABLES = 1  
  AND PARTITIONS = 0  
;
```

**Import**

# Why Change Manager DML?

- Saves hours of panel work
- Avoid Generate and Tape
  - CM DML is One-stop-shopping
  - ANALYSIS Creates all the code – verified to run

# Index of Samples HLQ.BMCCNTL(ACMDMLIX)

```
EDIT          BMCSCD.RTE121C.BMCCNTL(ACMDMLIX) - 01.00          Columns 00001 00072
Command ==> _____ Scroll ==> CSR
000169 ACMDMLUI
000170     The example DML in this file turns on table access control for all
000171     tables in a database.
000172 ACMDMLUJ
000173     The example DML in this file enables all row permissions for a
000174     table.
000175
000176 SPE2010 (BQU2829)
000177
000178 ACMDMLUL
000179     The example DML in this file converts partition-by-range table spaces
000180     with absolute page numbering, table-controlled partitioned table space
000181     and index-controlled partitioned table spaces to partition-by-range
000182     table spaces with relative page numbering.
000183
000184 SPE2104 (BQU3285)
000185
000186 ACMDMLUM
000187     The example DML in this file creates a new partition-by-growth table
000188     space for each table in a multi-table table space.
000189     After you edit the DML statement, you can use
000190     CHANGE MANAGER to import it.
```

## Process:

1. Copy HLQ.BMCCNTL(ACMDML\*) to your own library
2. Edit member and save
3. Create ALTER Workid in Change Manager
4. Import your DML to Workid
5. Analyze (Review Worklist!)
6. Execute to implement changes

# Process Example: Simple TS to PBG

```

# Multi Table/Tablespace to PBG Using Move Table (Db2 V12 FL508)

HLQ.BMCCNTL(ACMDMLUM)  
again.....

# Move Table Requirements

- Be at FL508
- Be at BMC SPE 2104 (April 2021)
- Change NOMOVETB to MOVETB in Analysis overrides
- Use IBM Reorg
- Move Table requires:
  - MAXPARTITIONS = 1
  - Define NO

# Multi TB/TS to Single TB/TS – Move Table

# Change Manager DML Pros

- Supports UDCL and Move Table
- Scales
  - 5 minutes Admin time for 50 or 5000 tables
- No Panel work
- No Generate-and-tape
- No Errors – Analysis checks it out

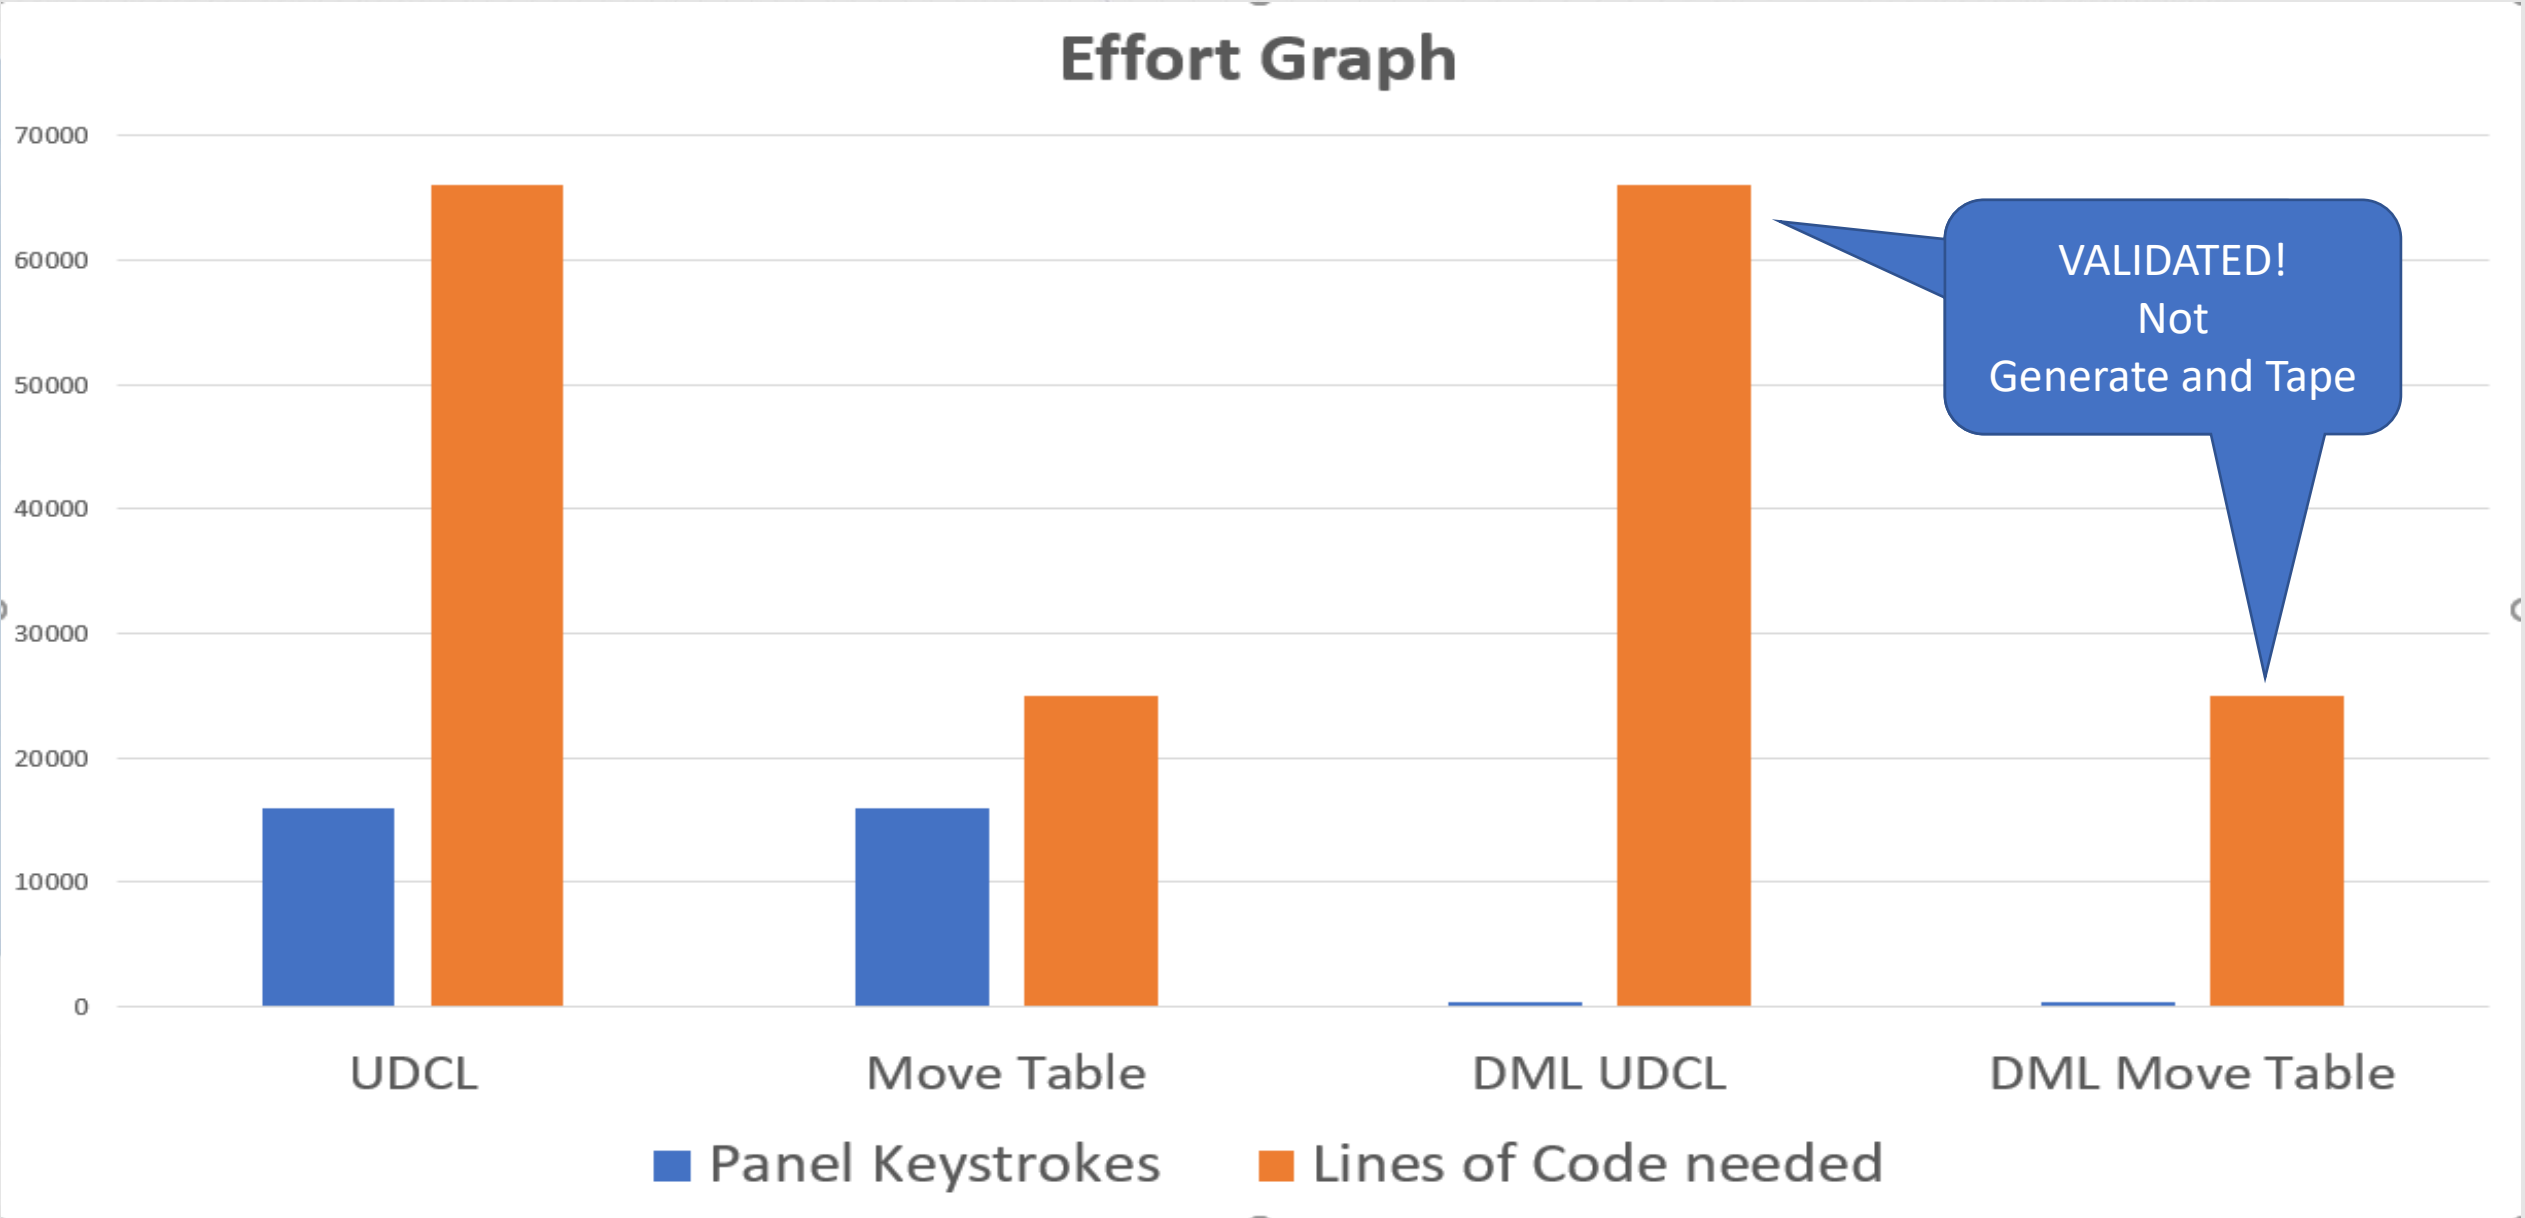

# Change Manager DML Cons

- Exclusive feature to BMC Change Manager

# Effort Graph – 400 Tables

# With Great Power Comes Great Responsibility

- Scope Change Manager DML to what your systems and change windows can handle (Where clause)
- 500,000 lines of code might be too much.....

# Post Conversion Processing

- Alter to MAXPARTIONS > 1 if you used Move Table
- Copy/Reorg and other maintenance on new PBGs
- Drop empty Tablespaces
  - Retire old TS utility jobs

# Recommendations

- Change Manager users
  - Use DML to Convert at any time regardless of Db2 FL
    - UDCL works!
    - Move Table if FL508
  - If MTTTS Tables are 7x24 and pre FL508
    - Move non-7x24 now with Change Manager DML and UDCL with 'where' clause
    - Wait until FL508 and use Change Manager DML and Move 7x24 Tables with 'where' clause
- Other Admin tools....
  - Panel work if must be done prior to FL508 (small to medium numbers of Tables)
  - Rename Process Pre-FL508 if simple environment
  - Wait for FL508 and Generate-and-Tape Move Table
    - Broadcom DB Analyzer and BMC Catalog Manager have template-type support for generating.

# Thank You
